Work Experience

FTB

Senior Data Engineer March 2023 - Present

- Automated cross-channel marketing pipelines using Airflow (Python) and BigQuery, eliminating 6–8 hours/week of manual effort and improving SLA adherence for campaign execution
- Engineered real-time event pipelines with Kafka, Pub/Sub, and a microservices architecture, reducing processing latency from 10 to 2 minutes across personalized offer workflows.
- Implemented unit testing and CI/CD pipelinesfor Airflow DAGs using Git and JIRA, decreasing data refresh failures by 25% and increasing production deployment stability
- Developed interactive Tableau dashboards over BigQuery and PostgreSQL, empowering 4+ product teams with real-time KPIs and cutting ad hoc report requests by 60%
- Collaborated with Data Science to integrate segmentation models using R and Python, increasing targeting precision by 12% and driving a 9% uplift in CTR

Sam's Club

Data Engineer | AdTech Division June 2022 - March 2023

- Architected and optimized PySpark pipelines on GCP (BigQuery, Dataproc, Cloud Storage) to ingest, standardize,and transform ad-delivery, pacing, and KPI datasets from seven major ad servers into a unified warehouse.
- Migrated and modernized Azure AD workflows into GCP, boosting runtime efficiency by 40% and cutting maintenance overhead by 30%.
- Engineered and unified key campaign KPIs — impressions, clicks, CPM, and ad-spend — into centralized media tables serving as the Single Source of Truth for campaign performance, pacing, billing, and deferred-revenue reporting.
- Productionized carousel recommendations from a batch prediction pipeline using PySpark, Databricks, and Azure Data Factory
- Partnered with analytics and billing teams on quarter-end financial close, reconciling delivery and spend metrics that improved KPI alignment by 32% and ensured 100% on-time financial closure across reporting cycles.
- Built end-to-end data flows feeding deferred-revenue tables, integrating campaign budgets, line-item spend, and delivery metrics — improving financial attribution accuracy by 28% and accelerating revenue recognition by 35%.

Education

University of Missouri-Kansas City

M.S. Computer Science (Data Science specialization)

May 2022

KL University

B.S. Computer Science and Engineering

May 2018

Technical Skills

Python, SQL, Pytorch, TensorRT

Recommendations, LLMs, Generative AI, NLP, Machine learning, Graph analytics

scikit-learn, pandas, Spark

Scala, RDBMS (Oracle & PostgreSQL, MySQL), NoSQL, R, AWS, GCP, Airflow

Tableau, Power BI, Snowflake, Databricks, Hadoop

Hive, Kafka, Linux, Informatica, DynamoDB, Flink, Vast

Side Projects

Resume Matcher Automatically analyzing resumes Comparing them with job requirements Providing a match score and missing skills [scikit-learn]

Voice AI Query Optimization System Voice-based question input (browser speech recognition) [Tensorflow BERT EfficientNet]

RAG Doc Que Overview A real-time RAG (Retrieval-Augmented Generation) system that allows users to upload documents (PDF, text) and ask questions [LangChain]

HCL Technologies

Data Engineer Analyst Aug 2018 - Jan 2021

- Constructed ETL frameworks using Informatica, AWS Glue, and Snowflake, increasing campaign data availability by 40% across marketing and CRM platforms
- Supported model deployment using SageMaker and Snowflake ML, boosting segmentation accuracy by 11% and enabling budget-optimized campaign personalization
